DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 and 2, drawn to a rotary trimmer having end retainers.
 - II. Claims 3-11, drawn to a rotary trimmer having a cam driver and a spring urging the blade towards the cam.
 - III. Claims 12-19, drawn to a rotary trimmer having means for rotating the shaft.
 - IV. Claim 20, drawn to a rotary trimmer having a pusher and a spring urging the pusher and the plurality of blades towards the cam.
 - V. Claims 22-32, drawn to a rotary trimmer having a knob rotatable to controllably position a selected one of the blades.
 - VI. Claims 33, drawn to a rotary trimmer having at least 3 circular cutting blades in the housing.
2. Claim 21 will be examined with any of the elected groups. Claim 21 links the inventions of groups I-VI. The restriction requirement of the linked inventions is subject to the nonallowance of the linking claim, claim 21. Upon the allowance of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s) depending from or otherwise including all the limitations of the allowable linking claim(s) will be entitled to examination in the instant application. Applicant(s) are advised that if any such claim(s) depending from or including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the

Art Unit: 3724

claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

3. The inventions are distinct, each from the other because the inventions of groups I-VI are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. For example, the rotary trimmer having end retainers of group I could be employed without the cam driver and a spring urging the blade towards the cam as in group II, and conversely, the cutting device having a cam driver and a spring urging the blade towards the cam of group II could be employed without the end retainers of group I. See MPEP § 806.05(d).

4. There is an excessive burden on the office to examine all of these inventions together, as shown by their search. See MPEP 808.02(C). For example, the device of group I will need to be searched in class 83, subclass 485, along with a unique text search. Group II would not be searched as above, but would instead be searched in class 83, subclass 614 accompanied by a different text search. Groups III-VI also would have unique searches.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different search and because of

their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
